

# Skid carrier export

A robust, payload-optimised trailer for transporting roller containers in accordance with DIN 30722.

# Skid Carrier

The trailer for roller container transport, from the Hüffermann modular system, excels in every sphere.

The skid carrier is a robust, payload-optimised trailer for transporting roller containers in accordance with DIN 30722. Hüffermann, with its modular component system, provides the right solution for every application, whether that's for container service or in long-distance transport.

## Skid carrier modular system

The Hüffermann modular construction offers two key advantages: individual design, which is tailored exactly to your requirements and high-quality production – 100% “Made in Germany” guaranteed. Hüffer-

mann only uses first-class vehicle components from renowned manufacturers, so their durability pays off over the course of their service life. Why not contact us? We'd love to help you.

## Skid carrier versions

The right solution for every application

### Your benefits

- + Robust construction
- + Chassis for high payload focal points
- + Individual trailer configuration

## Chassis design

The longitudinal girder construction throughout with optimised material strength ensures smooth container transport. The container is placed on the skid with the removable device and rolled over the chassis. Containers with defective rollers and different container lengths or waste compactors with additional rollers are no problem for the skid trailer.

Hüffermann designed the trailer hook of the skid trailer in such a way that the skid lies

in an inclined position over the container reserves, simplifying the setting process.

### Your benefits

- + Durable
- + Reduced wear to rolling surfaces
- + Safety when settling the container
- + Extremely robust

## Special versions of skid trailers

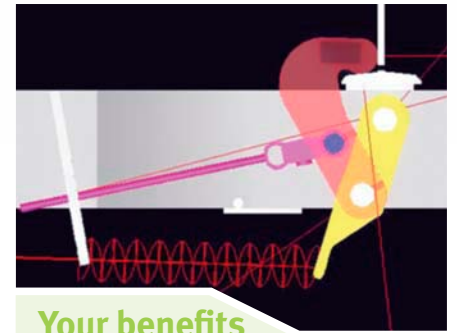

In contrast to DIN container suppliers, we also offer versions that meet other container standards, sometimes combining both. Examples of this are: The Marrel standard, MSTs, AFNOR, Svensk standard, etc. We adapt the chassis to the respective national

eligibility rules, e.g., three-axle versions in 24, 27, 28 or 30 t designs. We can supply the majority of trailers with a European type-approval (COC).

## Load securing system

A patented and certified, low-noise, pneumatic 4-compartment container locking, featuring a very low-maintenance and easy-to-repair design offers lasting, reliable cargo loading.

### Your benefits

- + Durable
- + Low noise pollution
- + Low maintenance costs
- + Reliable securing of loads
- + Extremely robust
- + Many years of practical experience

## Versions for rope device loading

In some markets, rope devices still play an important role. The skid trailer was originally designed by Hüffermann in the 1970s for this purpose. Even today, we still supply versions that can be just as easily loaded by a roll-off tipper as by a rope device.

### Your benefits

- + Robust construction
- + Chassis for high payload focal points
- + Individual designs

## Skid carrier with central axis design

A chassis can be selected for container lengths from 6000 mm – 7700 mm with 19.5" twin or 22.5" single tyres.

Two-axle and three-axle versions are available.

## Skid carrier versions

The right solution for every application

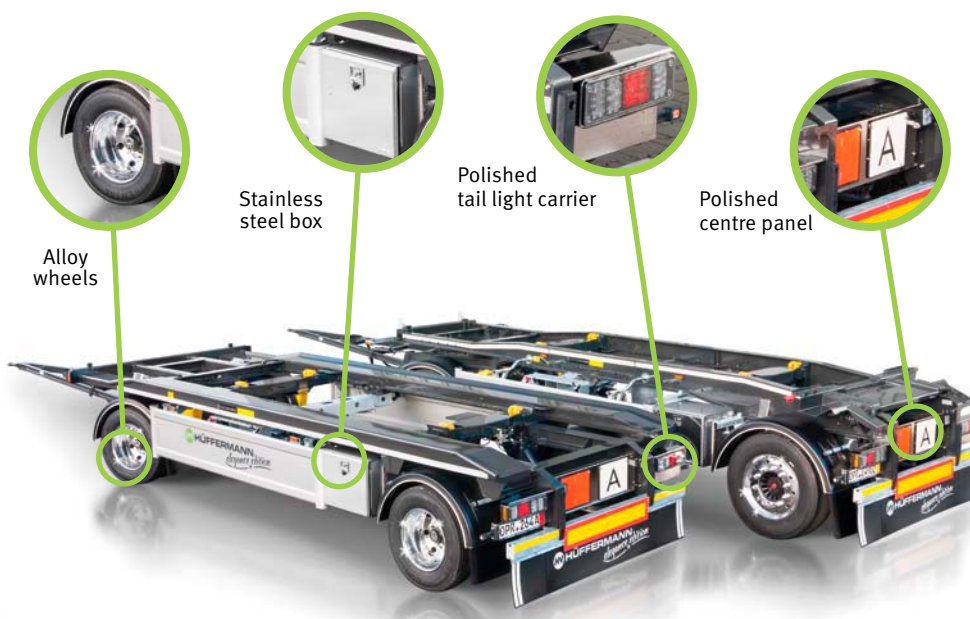

### Your benefits

- + Robust construction
- + Chassis for high payload focal points

## elegance edition – pure Hüffermann quality

Hüffermann always provides proven quality, due to the high demands placed on each individual production step.

## elegance edition: Durable and retains value

The skid carrier can be supplied as either a two-axle or three-axle version, with an air-sprung, disc-braked chassis, in the elegance edition.

### Your benefits

- + Fine design
- + Compact equipment package
- + Retains value
- + Durable

## Equipped for all markets

Hüffermann even has the necessary experience to be able to supply markets with special requirements. As a result, transporting two roller containers on 4-axle or 5-axle

trailers, with up to 42 t of gross weight, is possible. In this case, turntable versions or combinations of saddle chassis with dollies are available.

### Your benefits

- + Robust construction
- + Reliable securing of loads
- + Durable
- + Individual designs

HSA 4213-275LS

## Skid dump trailer

Hüffermann supplies skid dump trailers that can be front loaded for use in the container business generally, but also for road construction. With appropriate bulk debris slides or even semi-circular bulk debris,

these skid dump trailers can even supply road pavers directly. Technical lighting accessories, such as parking light systems, flashing warning lights and work lights, ensure that the vehicles are used safely.

## High payload

In terms of the general container business, Hüffermann also provides suitable solutions for international container standards: from two – five axles, from 10 – 42 t overall weight.

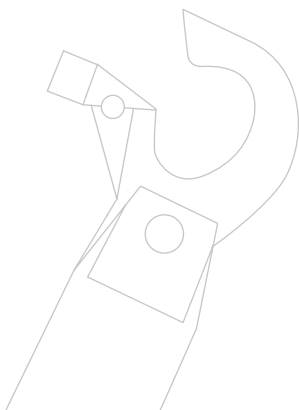

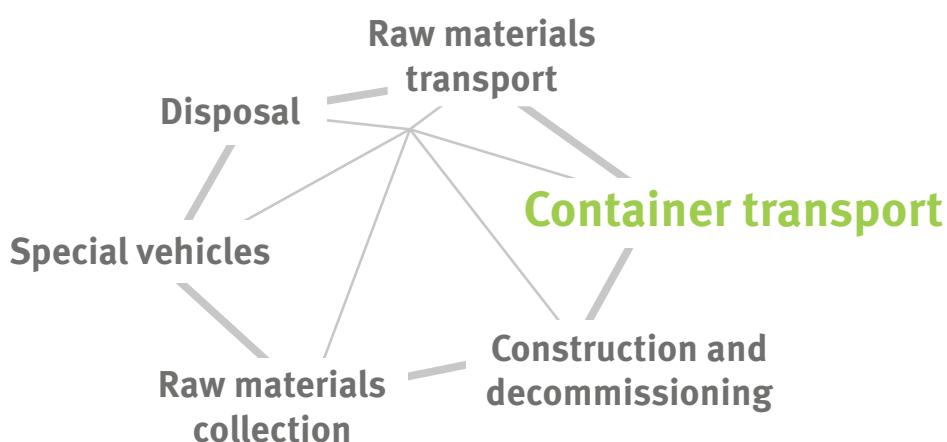

HSAK 3060-265-LS

### Your benefits

- + Robust construction
- + High payload
- + Retains value
- + High operational safety

We set standards as the market-leading manufacturer, showing off our strengths with detailed solutions for complete systems.
